

Your Partner for Multispecific Antibody Engineering

Let us bring your ideas to life.

Not every antibody can be combined to produce well-behaved multispecifics. The valency and geometry of each design can determine the production, target engagement and ultimately the requisite biological functions. **Our scientists will provide expert consultation services** to assist you in selecting the antibody formats that will provide optimal expression and performance. With 180+ formats engineered and manufactured to date, we will be your experienced partner in the creation of your custom multispecific antibody or fusion protein.

Recombinant Antibody Production

We have completed 21,000+ recombinant antibody production runs, demonstrating extensive expertise in delivering high-quality and consistent antibody solutions.

Comprehensive Antibody Portfolio

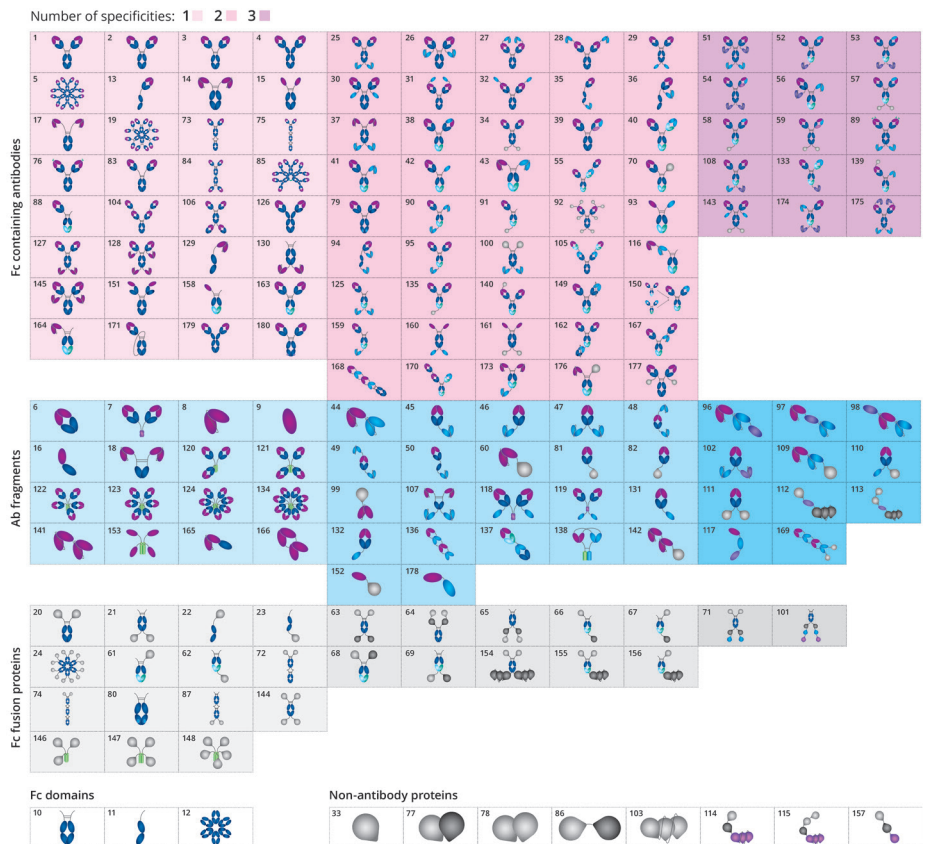

Our antibody catalog offers a diverse selection of recombinant antibodies and reagents to support research, diagnostics, and therapeutic development.

Hybridoma Sequencing Leadership

We have sequenced over 2,300 hybridomas in the past two years, enabling the preservation and optimization of valuable antibody-producing cell lines.

Differences in Bispecific Antibody Design Impact Efficacy and Stability

Absolute Antibody, now part of Vector Laboratories, was founded with the vision to make engineered recombinant antibodies accessible to all. We are proud to offer industry leading antibody engineering and recombinant antibody services, as well as personalized consultation throughout your project.
